

FACULTY OF ENGINEERING & TECHNOLOGY

MOBILE SECURITY

LECTURE -29

Umesh Kumar Gera
Assistant Professor
Computer Science & Engineering

OUTLINE

- **Top Mobile App Security Testing Tools**
- **MCQ**
- **References**

TOP MOBILE APP SECURITY TESTING TOOLS

Top Mobile App Security Testing Tools

Enlisted below are the most popular Mobile App Security Testing tools that are used worldwide.

☐ ImmuniWeb® MobileSuite

☐ Zed Attack Proxy

☐ Kiuwan

☐ QARK

☐ Micro Focus

☐ Android Debug Bridge

☐ CodifiedSecurity

☐ Drozer

☐ WhiteHat Security

☐ Synopsys

☐ Veracode

☐ Mobile Security Framework (MobSF)

TOP MOBILE APP SECURITY TESTING TOOLS

❑ ImmuniWeb® MobileSuite

Key Features:

- ❑ Mobile app and backend testing.
- ❑ Zero false-positive SLA.
- ❑ PCI DSS and GDPR compliances.
- ❑ CVE, CWE and CVSSv3 scores.
- ❑ Actionable remediation guidelines.
- ❑ SDLC and CI/CD tools integration.
- ❑ One-click virtual patching via WAF.
- ❑ 24/7 Access to security analysts.

❑ Zed Attack Proxy OWASP

Key Features:

- ❑ World's most popular open-source security testing tool.
- ❑ ZAP is actively maintained by hundreds of international volunteers.
- ❑ It is very easy to install.
- ❑ ZAP is available in 20 different languages.
- ❑ It is an international community-based tool which provides support and includes active development by international volunteers.
- ❑ It is also a great tool for manual security testing.

TOP MOBILE APP SECURITY TESTING TOOLS

❑ Kiuwan

Key Features:

- ❑ Kiuwan provides a 360° approach to mobile app security testing, with the largest technology coverage.
- ❑ Kiuwan security testing includes static code analysis and software composition analysis, with automation at any stage of the SDLC. Coverage of the main languages and popular frameworks for mobile development, with integration at IDE level.

❑ QARK

Key Features:

- ❑ QARK is an open-source tool.
- ❑ It provides in-depth information about security vulnerabilities.
- ❑ QARK will generate a report about potential vulnerability and provide information about what to do in order to fix them.
- ❑ It highlights the issue related to the Android version.
- ❑ QARK scans all the components in the mobile app for misconfiguration and security threats.
- ❑ It creates a custom application for testing purposes in the form of APK and identifies the potential issues.

TOP MOBILE APP SECURITY TESTING TOOLS

❑ Micro Focus

Key Features:

- ❑ Fortify performs comprehensive mobile security testing using a flexible delivery model.
- ❑ Security Testing includes static code analysis and scheduled scan for mobile apps and provides the accurate result.
- ❑ Identify security vulnerabilities across – client, server, and network.
- ❑ Fortify allows standard scan which helps to identify malware.
- ❑ Fortify supports multiple platforms such as Google Android, Apple iOS, Microsoft Windows and Blackberry.

❑ Android Debug Bridge

Key Features:

- ❑ ADB can be integrated with Google's Android Studio IDE.
- ❑ Real-time monitoring of system events.
- ❑ It allows operating at the system level using shell commands.
- ❑ ADB communicates with devices using USB, WI-FI, Bluetooth etc.
- ❑ ADB is included in the Android SDK package itself.

TOP MOBILE APP SECURITY TESTING TOOLS

❑CodifiedSecurity

Key Features:

- ❑ It is an automated testing platform that detects security loopholes in the mobile app code.
- ❑ Codified Security provides real-time feedback.
- ❑ It is supported by machine learning and static code analysis.
- ❑ It supports both Static and Dynamic testing in mobile app security testing.
- ❑ Code-level reporting helps to get the issues in the mobile app's client-side code.
- ❑ Codified Security supports iOS, Android platform, etc.
- ❑ It tests a mobile app without actually fetching the source code. The data and source code is hosted on the Google cloud.
- ❑ Files can be uploaded in multiple formats such as APK, IPA, etc.

TOP MOBILE APP SECURITY TESTING TOOLS

❑Drozer

Key Features:

- ❑Drozer is an open-source tool.
- ❑Drozer supports both actual android devices and emulators for security testing.
- ❑It only supports the Android platform.
- ❑Executes Java-enabled code on the device itself.
- ❑It provides solutions in all areas of cyber security.
- ❑Drozer support can be extended to find and exploit hidden weaknesses.
- ❑It discovers and interacts with the threat area in an android app.

❑WhiteHat Security

Key Features:

- ❑It is a cloud-b
- ❑It supports both Android and iOS platforms.
- ❑Sentinel platform provides detailed information and reporting to get the status of the project.
- ❑Automated static and dynamic mobile app testing, it is able to detect loophole faster than any other tool or platform.
- ❑Testing is performed on the actual device by installing the mobile app, it does not use any emulators for testing.
- ❑It gives a clear and concise description of security vulnerabilities and provides a solution.
- ❑Sentinel can be integrated with CI servers, bug tracking tools, and ALM tools.

TOP MOBILE APP SECURITY TESTING TOOLS

 Synopsys

Key Features:

- ❑ Combine multiple tools to get the most comprehensive solution for mobile app security testing.
- ❑ Focuses on delivering the security defect-free software into the production environment.
- ❑ Synopsys helps to improve quality and reduces costs.
- ❑ Eliminates security vulnerabilities from the server-side applications and from APIs.
- ❑ It tests vulnerabilities using embedded software.
- ❑ Static and Dynamic analysis tools are used during mobile app security testing.

 Veracode

VERACODE

Key Features:

- ❑ It is easy to use and provides accurate security testing results.
- ❑ Security tests are performed based on the application. Finance and healthcare applications are tested in-depth while the simple web application is tested with a simple scan.
- ❑ In-depth testing is performed using complete coverage of mobile app use cases.
- ❑ Veracode Static Analysis provides a fast and accurate code review result.
- ❑ Under a single platform, it provides multiple security analysis which includes static, dynamic and mobile app behavioral analysis.

TOP MOBILE APP SECURITY TESTING TOOLS

❑ Mobile Security Framework (MobSF)

Key Features:

- ❑ It is an open-source tool for mobile app security testing.
- ❑ Mobile app testing environment can be easily set-up using MobSF.
- ❑ MobSF is hosted in a local environment, so sensitive data never interacts with the cloud.
- ❑ Faster security analysis for mobile apps on all three platforms (Android, iOS, Windows).
- ❑ MobSF supports both binary and Zipped source code.
- ❑ It supports Web API security testing using API Fuzzer.
- ❑ Developers can identify security vulnerabilities during the development phase.

MCQ

Q 6 - What is log message in android?

- A - Log message is used to debug a program.
- B - Same as printf()
- C - Same as Toast().
- D - None of the above.

Q 7 - How to fix crash using log cat in android?

- A - Gmail
- B - log cat contains the exception name along with the line number
- C - Google search
- D - None of the above.

Q 8 - Fragment in Android can be found through

- A - findViewById()
- B - findFragmentByID()
- C - getContext.findFragmentByID()
- D - FragmentManager.findFragmentByID()

Q 9 - What is the purpose of super.onCreate() in android?

- A - To create an activity
- B - To create a graphical window for subclass
- C - It allows the developers to write the program
- D - None of the above

Q 10 - What is anchor view?

- A - Same as list view
- B - provides the information on respective relative positions
- C - Same as relative layout
- D - None of the above
