FACULTY OF ENGINEERING & TECHNOLOGY
MOBILE SECURITY

LECTURE -40

Umesh Kumar Gera
Assistant Professor
Computer Science & Engineering

OUTLINE

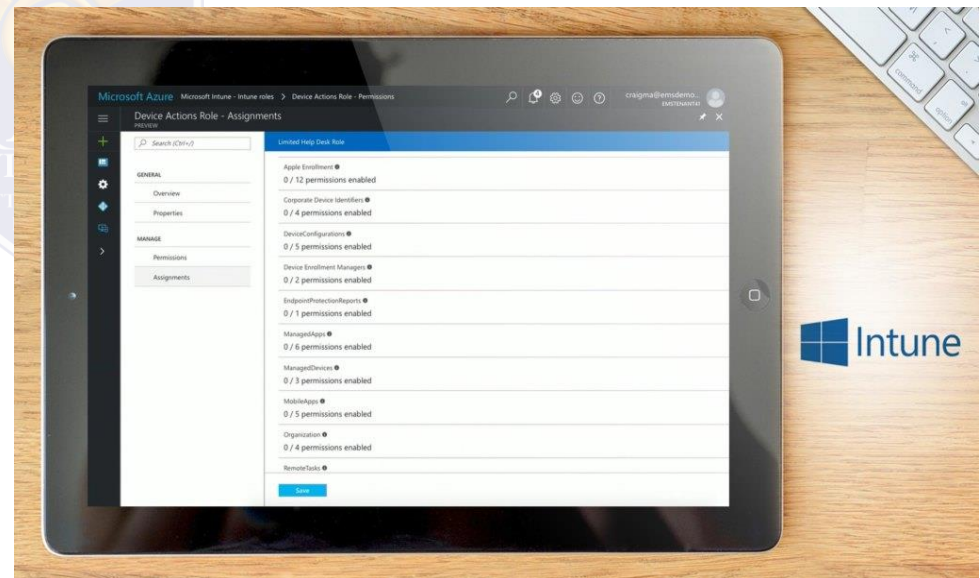

- **MDM Platform**
 - **Intune**
 - **IBM MaaS360**
 - **Cisco Meraki**
 - **AirWatch MCQ**
 - **SAP**
 - **Trend Micro Mobile Security**
 - **XenMobile**
 - **Manage Engine Mobile Device Manager Plus**
- **MCQ**
- **References**

Intune

Intune is from Microsoft. It combines various Microsoft Azure security and identity management solutions for an updated portal experience although it still contains legacy admin functions. It lets you define a mobile management strategy that fits the needs of your organization and apply flexible mobile device and app management controls, allowing your employees to work with the devices and apps they choose while protecting your company information.

- Mobile device and app management
- Advanced Microsoft Office 365 data protection
- Integrated PC management
- Integrated on-premises management
- Identity and access management
- Information protection
- Identity-driven security

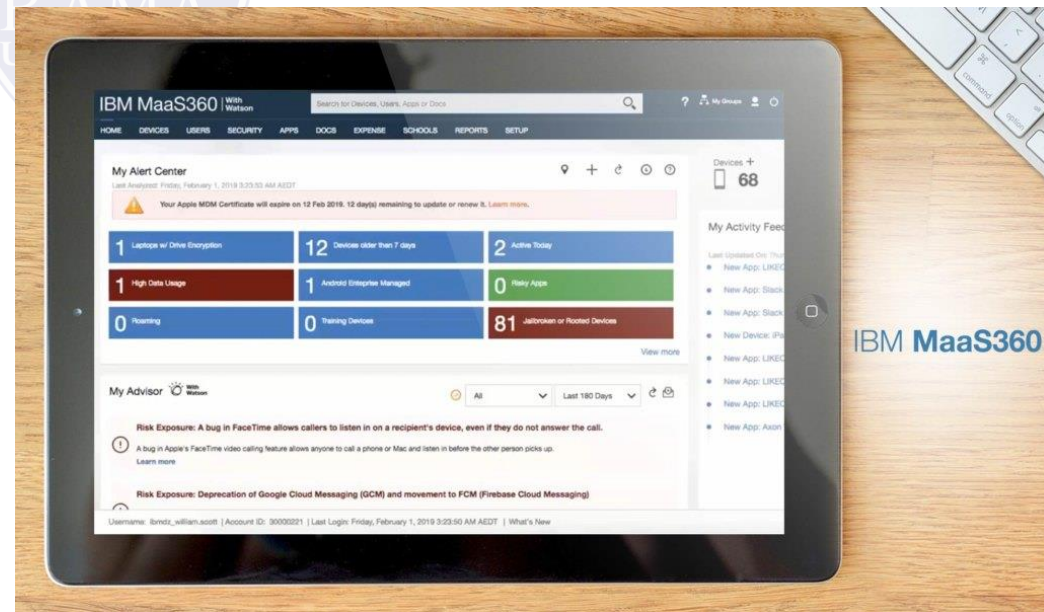

MDM PLATFORM

IBM MaaS360

IBM MaaS360 with Watson is offered as a mobile device management solution for your business. It gives you visibility and control of iOS, macOS, Android, and Windows devices through an intuitive portal that enables you to get the most out of MDM without the hassle and complexity. It lets you take advantage of seamless over-the-air (OTA) device enrollment so you can begin managing your devices quickly and easily with no hardware to install. Mobile device and app management

- ❑ Powered by Watson engine
- ❑ Provides secure container to store corporate content
- ❑ Multiple OS and platform security
- ❑ Supports IoT devices
- ❑ Supports ruggedized Android devices and apps
- ❑ Supports Windows 10 to Windows 7 legacy PCs

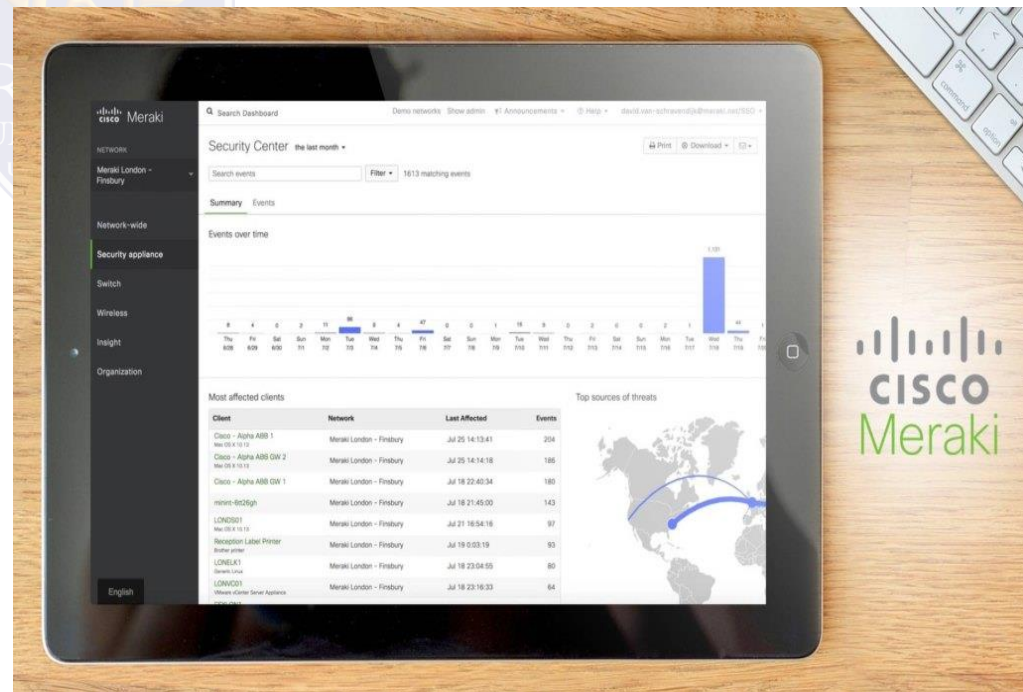

MDM PLATFORM

Cisco Meraki

Cisco Meraki provides unified management of mobile devices, Macs, PCs, and the entire network from a centralized dashboard. It gives you the means to enforce device security policies, deploy software and apps, and perform remote, live troubleshooting on thousands of managed devices. Furthermore, the unified multi-device management platform provides OTA centralized management, diagnostics, and monitoring for the mobile devices managed by your organization.

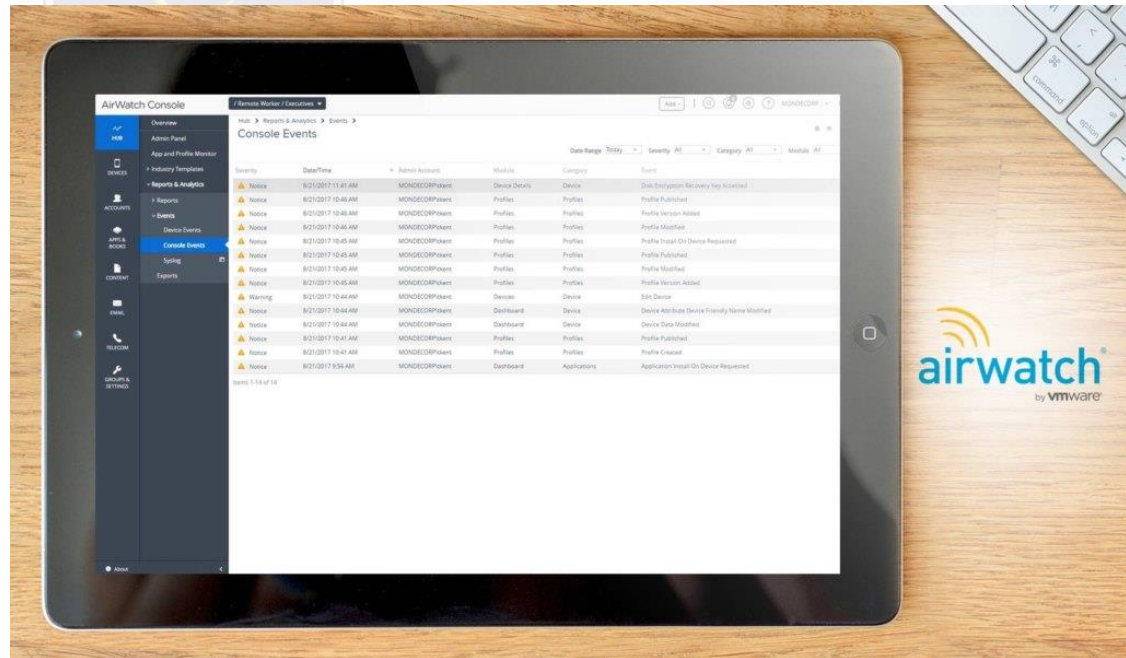

- Scalable endpoint configuration
- On-device content management
- Secure support for BYOD initiatives
- Automatic device classification
- Automatically apply network policies by device type
- Analyze network activity with automatic reporting

AirWatch

AirWatch MDM is a product of VMware, a leading technology solutions provider. It is a device lifecycle management software that enables IT people to configure, manage, and support mobile devices in-house and remotely. With the MDM solution, waiting time for configuration is reduced, as it provides easy onboarding and quick configuration of settings. Coupled with its easy-to-use architecture, it enables organizations to provision programs in bulk.

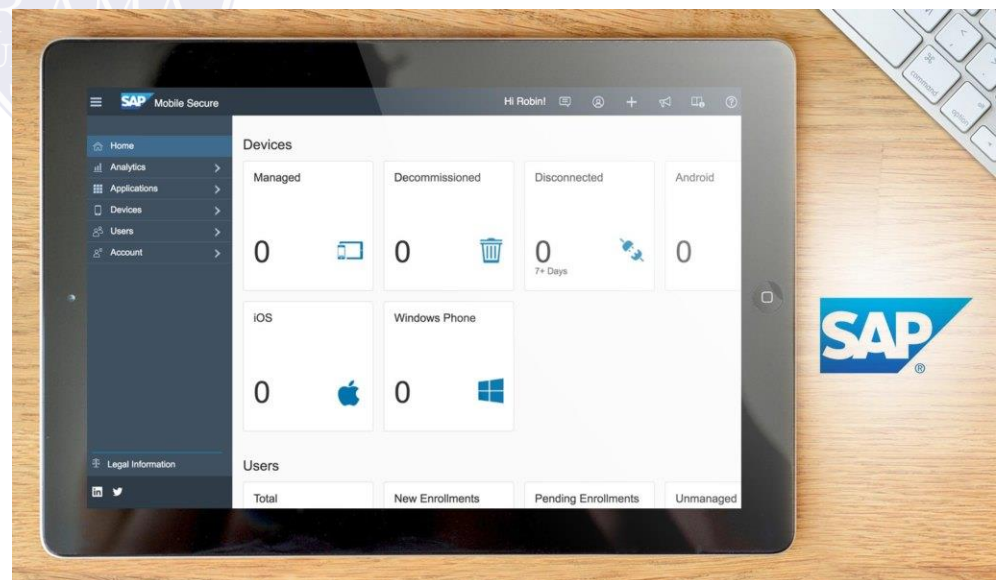

- Quick configuration
- Open architecture and scalable system
- Flexible integration
- Automatic upgrades and same-day support
- Device-level encryption
- Real-time MDM deployment

SAP

❑ SAP Mobile Secure lets you move beyond MDM with an enterprise mobility management (EMM) solution in the cloud, enabling you to protect and manage your company's mobile devices and apps. The cloud-based EMM platform offers integrated tools for MDM, BYOD security, mobile application management (MAM), and more. You can manage mobile device security from one SaaS platform and even set up your own enterprise app store. With SAP Mobile Secure you get to secure your organization and employees' mobile devices and apps without compromising the user experience.

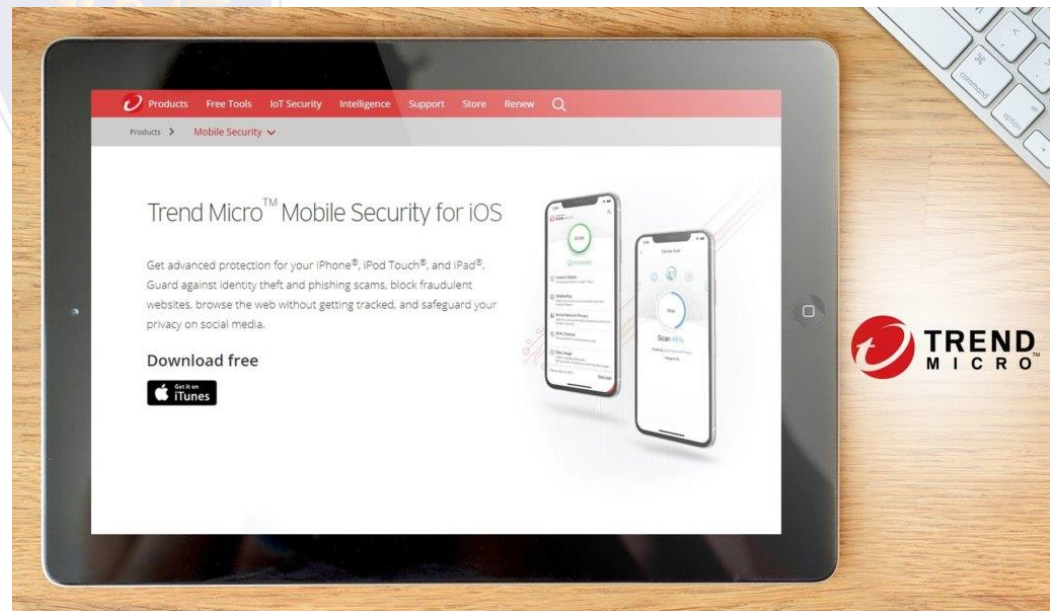

- ❑ Mobile device and app management
- ❑ Policy compliance
- ❑ Simple self-service
- ❑ Enterprise app store
- ❑ Streamline app deployment and customization
- ❑ Frictionless mobile user experience

Trend Micro Mobile Security

Trend Micro Mobile Security offers a mobile security solution to let you stay safe no matter where you are and what you do. It is built to support Windows, Android and iOS devices, keeping them protected against loss, data theft, viruses, and other online threats. It also guards against phishing scams, identity theft, and fraudulent websites, and enables browsing without being tracked to safeguard your privacy on social media.

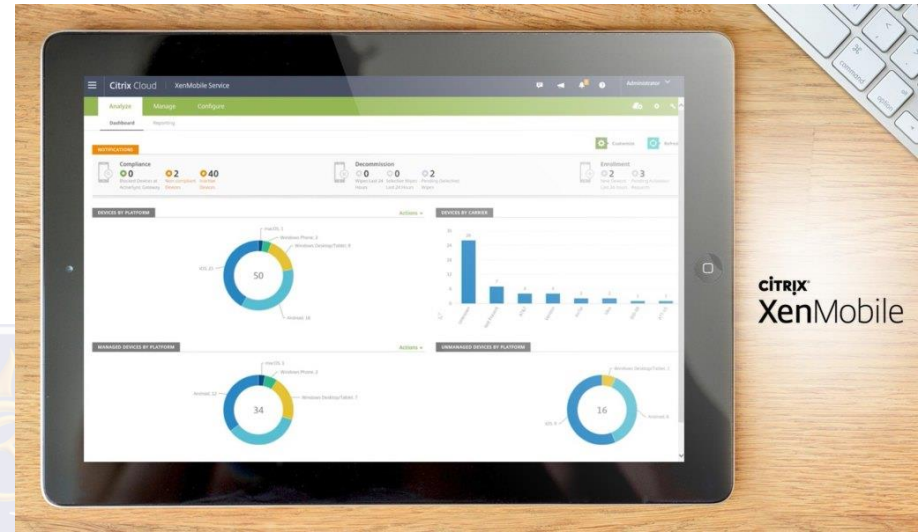

- ❑ Protection against web threats
- ❑ Password manager to handle site logins
- ❑ System tune-up
- ❑ Privacy protection on social media
- ❑ Smart protection network
- ❑ Mobile app reputation technology

MDM PLATFORM

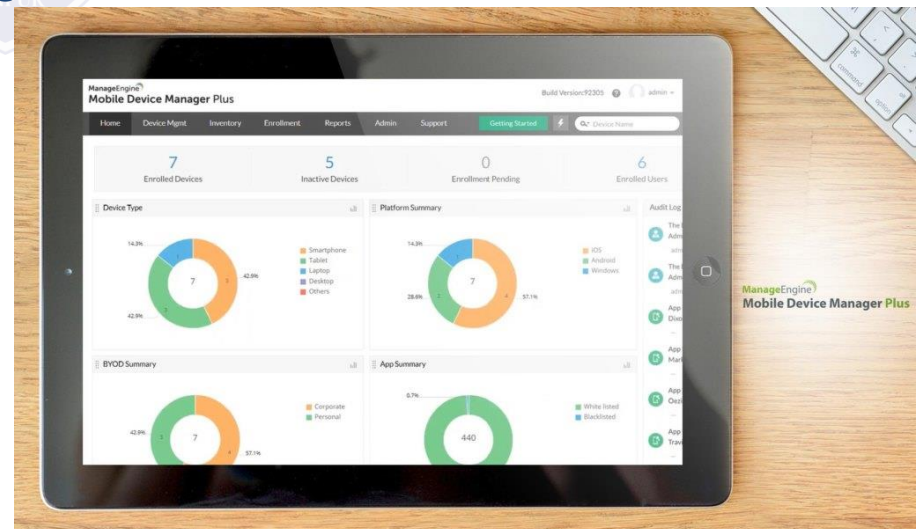

XenMobile

- Unified endpoint management
- Mobile device, app, and content management
- Secure network gateway
- Enterprise-grade mobile productivity apps
- Office 365 integration
- Mobile control hub

Manage Engine Mobile Device Manager Plus

- Device enrollment
- App, email, and profile management
- Remote troubleshooting
- Security, asset, and content management
- Remote troubleshooting
- Audit and reports

MCQ

11. Which of the following is not a sniffing tool?

- a) Wireshark
- b) Dude Sniffer
- c) Maltego
- d) Look@LAN

12. A sniffer, on the whole turns your system's NIC to the licentious mode so that it can listen to all your data transmitted on its division.

- a) True
- b) False

13. A _____ on the whole turns your system's NIC to the licentious mode so that it can listen to all your data transmitted on its division.

- a) Phishing site
- b) Sniffer tool
- c) Password cracker
- d) NIC cracker

14. In _____ sniffing, the network traffic is not only supervised & locked but also be can be altered in different ways to accomplish the attack.

- a) passive
- b) signal
- c) network
- d) active

15. _____ are those devices which can be plugged into your network at the hardware level & it can monitor traffic.

- a) Hardware sniffers & analyzers
- b) Hardware protocol analyzers
- c) Hardware protocol sniffers
- d) Hardware traffic sniffers and observers
