MODERN CONCEPT OF CHILD CARE Child

Health nursing is undergoing tremendous advancement just like pediatric medicine and surgery. The current trends in the practice are based on researches that have taken place in the field of pediatric nursing

Trends are as following:

Family centered care

- High technology care Evidence based practice
- A traumatic care Cost containment
- Prevention and health promotion

1. FAMILY CENTERED CARE –

It is based on philosophy that quality care can be provided in an environment that support family integrity and promote psychological and physiological health of the family. fcc provide a holistic approach than simply providing medical and nursing care. Parents know best about their Childs need more, aware of their Childs behavior and habits.

The 2 basic concepts of family centered care are

- Enabling
- Empowering

ENABLING

All the family member are helped by the professional to create opportunities and mean to utilize their present ability competence and acquire new skills that are necessary to provide care to their ill children.

EMPOWERING

Empowering help to faster the strength of family member to cope up and withstand stress related to sickness of their children In FCC the nurse need to move further from describing what is upsetting to families to describing intervention that are helpful and providing the same recipients of care, nurses should help families to make responsible decisions education

2. HIGH TECHNOLOGY CARE

Advancement in medical field has created the care of children too technologically versatile. The nurse also needs to be technologically competent enough to meet the nursing care needs of children. The advancement in diagnostic technology has made detection of many disorders even in the fetal period

3. EVIDENCE BASED PRACTICE

In evidence based practice nurses need to make decisions on the best available evidence EBP in nursing provides a systematic approach to enable nurse to effectively use. Clinical practice guidelines (CPGs) and patient centered multidisciplinary, multidimensional Plans of Care will help nursing team move toward evidence based practice and improve the process of Care delivered. The nurse needs to be vigilant in practicing EBP in nursing children. PRIMARY NURSING

4. ATRAUMATIC CARE

It is the provision of therapeutic care in setting by personnel and with intervention eliminates or minimizes the psychological and physical distress experienced by child and their families in health care system.

principles of a traumatic care:- interventions

5. COST CONTAINMENT

Cost containment is a management technique utilized to reduce the cost of hospitalization. It is reduced in many ways in hospitals either by cutting nursing positions or by improving process of care and tightening non labour resources.

6. PREVENTION AND HEALTH PROMOTION

The pediatric nurse applied health promotion and health maintenance in all setting in which children are served. The nurse possesses a comprehensive background on all aspects of children and an understanding of child growth and development. The family is role in the children's health is critical child health depends upon preventive care. Majority of the child health problems are preventable. Modern concept of child health emphasize on continuous care of whole child.
