The fractional part is repeatedly multiplied by 2 giving:

Thus $\mathbf{5 8 . 3 1 2 5}_{10}=\mathbf{1 1 1 0 1 0 . 0 1 0 1}_{2}$

## Now try the following exercise

## Exercise 18 Further problems on conversion of denary to binary numbers (Answers on page 272)

In Problems 1 to 4 , convert the denary numbers given to binary numbers.

1. (a) 5
(b) 15
(c) 19
(d) 29
2. (a) 31
(b) 42
(c) 57
(d) 63
3. (a) 0.25
(b) 0.21875
(c) 0.28125
(d) 0.59375
4. (a) 47.40625
(b) 30.8125
(c) 53.90625
(d) 61.65625

### 5.4 Conversion of denary to binary via octal

For denary integers containing several digits, repeatedly dividing by 2 can be a lengthy process. In this case, it is usually easier to convert a denary number to a binary number via the octal system of numbers. This system has a radix of 8 , using the digits 0,1 , $2,3,4,5,6$ and 7 . The denary number equivalent to the octal number $4317_{8}$ is

$$
4 \times 8^{3}+3 \times 8^{2}+1 \times 8^{1}+7 \times 8^{0}
$$

i.e. $\quad 4 \times 512+3 \times 64+1 \times 8+7 \times 1$ or $2255_{10}$

An integer denary number can be converted to a corresponding octal number by repeatedly dividing by 8 and noting the remainder at each stage, as shown below for $493_{10}$

Thus $493_{10}=755_{8}$
The fractional part of a denary number can be converted to an octal number by repeatedly multiplying by 8 , as shown below for the fraction $0.4375_{10}$

For fractions, the most significant bit is the top integer obtained by multiplication of the denary fraction by 8 , thus

$$
0.4375_{10}=0.34_{8}
$$

The natural binary code for digits 0 to 7 is shown in Table 5.1, and an octal number can be converted to a binary number by writing down the three bits corresponding to the octal digit.

## Table 5.1

| Octal digit | Natural <br> binary number |
| :---: | :---: |
| 0 | 000 |
| 1 | 001 |
| 2 | 010 |
| 3 | 011 |
| 4 | 100 |
| 5 | 101 |
| 6 | 110 |
| 7 | 111 |

Thus $437_{8}=100011111_{2}$
and $26.35_{8}=010110.011101_{2}$
The ' 0 ' on the extreme left does not signify anything, thus $26.35_{8}=10110.011101_{2}$

Conversion of denary to binary via octal is demonstrated in the following worked problems.

Problem 7. Convert $3714_{10}$ to a binary number, via octal.

Dividing repeatedly by 8 , and noting the remainder gives:
